---

# Purpose

› Virtual-ECU development to run the unmodified binary (L4 Simulation).

› Assist Software Defined Vehicle Development with Virtualization.

› Reuse Peripheral's C-model from higher abstraction level (L3 vECU) in L4 Simulation.

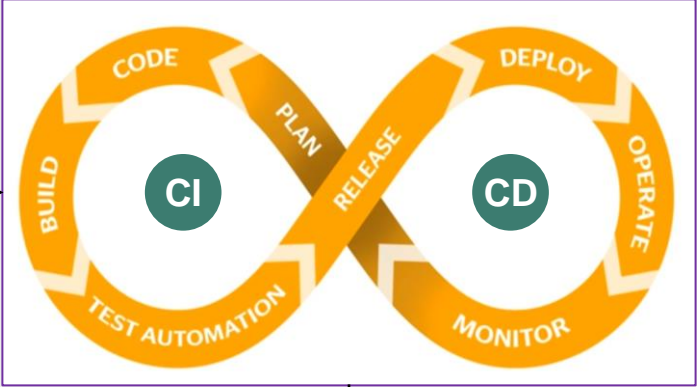

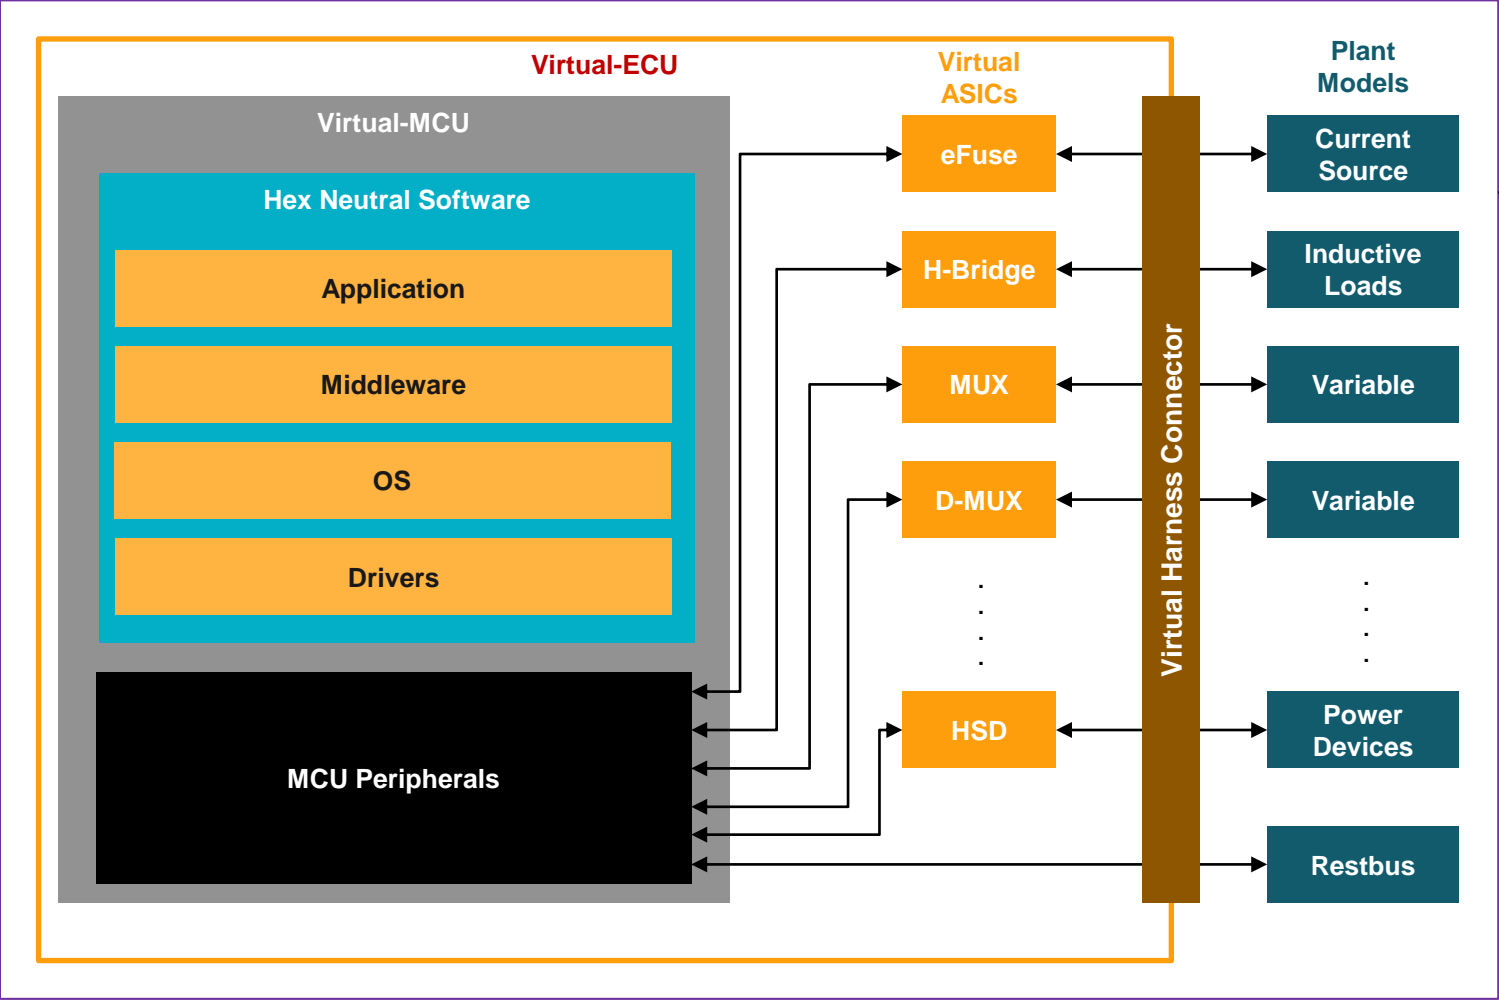

› Create a generic L4 framework, which could be re-used in other vendors framework.

› Provide a scalable solution for L4 vECU development.

# Big Picture

# SystemC Adapter Verification

Integrated external test library into COSIDE

## Port Reset Test

```
----- Start Test Case : PortResetTest @ 1 us -----
Pass : Port Name = ivOUTPUT_OUT0, Read Reset Value = 0.000000
Pass : Port Name = ivOUTPUT_OUT1, Read Reset Value = 0.000000
Pass : Port Name = ivOUTPUT_VREG, Read Reset Value = 4.500000
Pass : Port Name = iOUTPUT_OUT0, Read Reset Value = 0
Pass : Port Name = iOUTPUT_OUT1, Read Reset Value = 0
----- End Test Case: PortResetTest @ 1 us -----
***** Test Case Summary : PortResetTest *****
Test Result      = PASS
Total No. of tests = 5
No. of tests Passed = 5
No. of tests Failed = 0
*****
```

## State Transition Test

```
Failsafe_to_PrestandbyMode_Test Output
----- Start Test Case : Failsafe_to_PrestandbyMode_Test @ 5020 ns -----
Pass : Port Name = ivOUTPUT_OUT0, Read Expected Value = 0.000000
Pass : Port Name = ivOUTPUT_OUT1, Read Expected Value = 0.000000
Pass : Port Name = ivOUTPUT_VREG, Read Expected Value = 4.500000
Pass : Port Name = iOUTPUT_OUT0, Read Expected Value = 0
Pass : Port Name = iOUTPUT_OUT1, Read Expected Value = 0

5	SystemC Adapter Verification	12
<b>6</b>	<b>Advantages of using Coside</b>	<b>14</b>
7	Future Scope	16

---

# Advantages of using Coside

## Open Standard

Offers SystemC & TLM based simulation without any vendor specific flavor

## Reusability

The Generated code could be **reused** in different platforms without much modifications

## Simplifies Library Integrations

Supports **integration** of external libraries & enhances reusability in layered architectures

## Minimal Development Time

Code generation **simplifies & reduces** the efforts to create models.

# Agenda

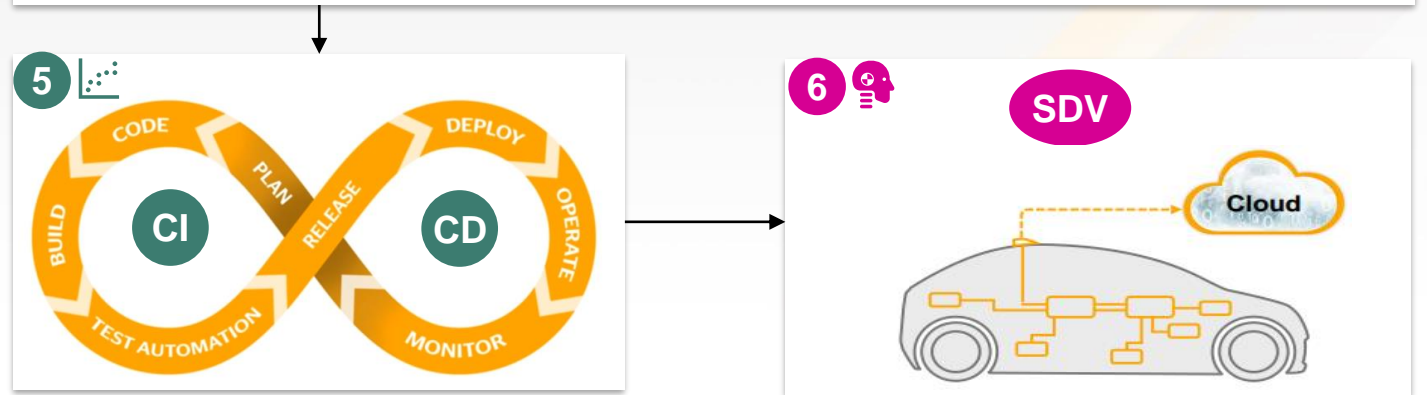

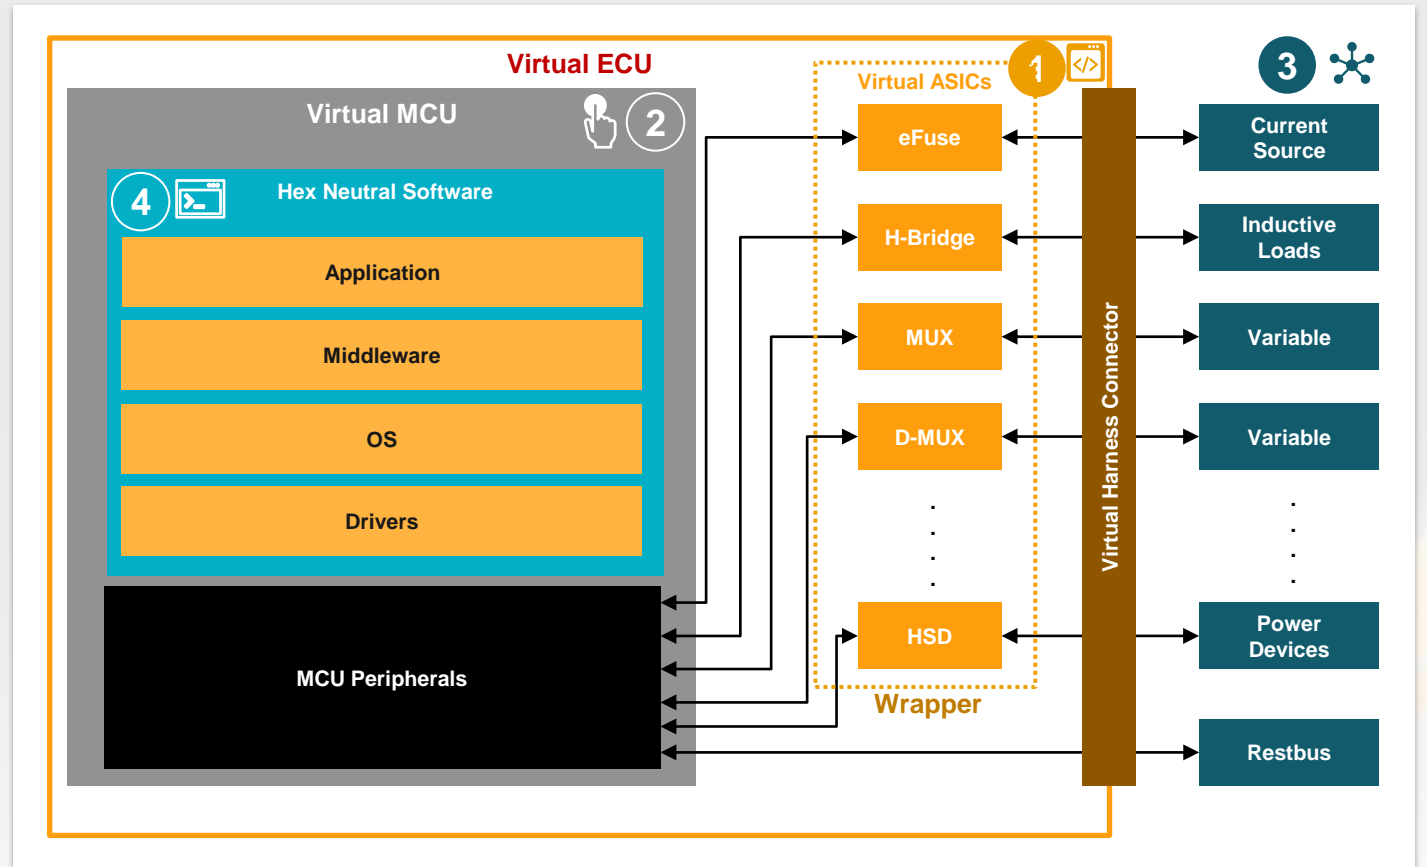

---

1	Purpose	3
2	Reusing C-models	6

4	SystemC Adapter Design	10
5	SystemC Adapter Verification	12
6	Advantages of using Coside	14
<b>7</b>	<b>Future Scope</b>	<b>16</b>

---

# Future Scope

- 1 Implement Wrapper around 'SystemC Adapter' for vendor specific simulation environment.
- 2 Use the virtual peripheral implementation in simulation environment to form L4 Virtual-ECU.
- 3 Connect the Plant Models to the Virtual-ECU via virtual harness connector.
- 4 Execute & validate the Hex Neutral Software in the L4 Virtual-ECU environment.
- 5 Integrate it in CI/CD Environment – To aid regression Testing.
- 6 Use this Platform to accelerate SDV development.

**Thank You!!**
